## Instruction Practice Inventory (IPI) Observer Certification

Develop the capacity to accurately collect school-wide student engagement data using the IPI observational rubric. Develop the capacity to facilitate faculty analysis of the school-wide data profiles and the deep reflective activities necessary for improving student engaged learning.

The IPI Data Profile system was established to accurately measure student engaged learning from various instructional practices across an entire school. Information gathered in protocol driven manner for data provides a valid picture of learning and instruction across a school or school system. School administrators have reported that their daily walk-through practices were enhanced as a result of this training.
